SUBJECT: CDB-0006-16 – Design-Build Services - Horizontal & Civil Engineering – Orange Picker Road Realignment and Parking Lot
AMENDMENT 51B PO 624931-21

In accordance with Design Build CDB-0006-16, Contract 6533-54, the Orange Picker Road Realignment and Parking Lot was awarded by Amendment 51A in the amount of $428,276.58 to provide 100% design and permitting for Orange Picker Road Realignment and Parking Lot. Coxwell Contracting, Inc. for Orange Picker Road Realignment and Parking Lot be amended to incorporate the attached Scope and Fee Summary, Exhibit AAA-2 to increase the GMP by $3,072,306.10 to a new GMP amount of $3,500,582.68, known as Amendment 51B.

Re: Fee Proposal for Orange Picker Road Realignment & Alberts Field Design-Build Construction Delivery for City of Jacksonville City Contract No. 71754-22

Dear Mr. Goldsberry, P.E.:

J.B. Coxwell Contracting, Inc. (JBCCI) is pleased to submit for your review and consideration the following design-build scope of services and attached lump sum fee proposal for the above referenced project. The scope of work in the attached Fee proposal includes design and construction for the Realignment of Orange Picker Road at Brady Road and the reconstruction of the parking lot at Alberts Field. Design, geotechnical evaluations, and permitting are already in process via previous amendments and ten set approval is in its third submission with COJ. The design included in this proposal includes the street lighting and post design services based on the design scope in GAI's proposal.

The proposed lump sum amount for this project is $3,072,306.10, which includes a 10% project contingency. The project contingency is for the Design-Builder's benefit and not for changed field conditions, unknown field conditions or added scope of work. JBCCI will obtain a COJ right of way permit for this work as required. This proposal assumes 10-set approval is forthcoming in the near future. Coordination with JEA Electric to relocate the power poles to the new Right of Way is included in this proposal; however, the actual construction time for JEA electric relocation is out of JBCCI's control and the assumed duration is 30 calendar days after clearing & grubbing is completed. The work related to this project will be completed within two hundred ten calendar days (210) from notice-to-proceed.

This lump sum proposal is inclusive of only those services noted on the attached fee summary and which are anticipated at this time. No services or work other than those noted in the fee proposal are included. In addition, any unknown condition(s) which may surface during construction or any other increase in scope of services may result in a request for applicable fees. No work will proceed however, without first obtaining approval from the City for any applicable services.

This proposal includes the relocation of the JEA water main and force main in the new Right of Way on Orange Picker Drive. It has been determined between COJ and JBCCI that the relocation of the water main and force main is in the best interests of all parties involved. This proposal assumes that JEA will inspect at no additional cost to JBCCI. The attached plans are assumed as approved with only minor changes required. This

proposal includes roadway case X asphalt repairs on Brady Road. Milling and resurfacing of Brady Road is not included in this proposal.

One possible savings could be converting the turf block pavers in Alberts Field to the other typical section in Alberts Field (04" Crushcrete). If approved, the potential savings are $100,000.

Due to the volatility of materials and the constant fluctuations in material pricing/availability, this proposal is valid for 30 days and assumes Construction can commence 45 days from NTP.

We are again very appreciative of the opportunity to provide you with our design-build services. Should you have any questions or need any further information, please do not hesitate to contact us.

Regards,
J.B. Coxwell Contracting, Inc.

MAP SHOWING ROUTE & TOPOGRAPHIC SURVEY OF: ORANGE PICKER ROAD REALIGNMENT

ADJACENT TO SIDEWALK

NOTES:

1. A transformer base is required for both conventionally-powered and solar-powered applications. Install pull box, conduit, wiring, and grounding in accordance with Index 980-120 based on the powering configuration called for in the Plans.
2. Install the RRFB in pairs, one on either side of approach traffic.
3. Install controller on the backside of post from approach traffic.
4. Install a 30" x 30" W11-2 sign on two-lane roadways and a 36" x 36" W11-2 sign for multilane roadways.
5. Install push button and FTP-68C-21 sign in accordance with Index 665-001.
6. Engage all threads on the transformer base and post unless the aluminum post is fully seated into base.
