Defined Contribution Plan Advisory Committee
Defined Contribution Disability and Survivorship Panel
City of Jacksonville General Employees Defined Contribution Plan Disability and Survivorship Benefits
117 West Duval Street, Suite 330
Jacksonville, FL 32202

Dear Board of Trustees Members:

We are pleased to submit this Actuarial Valuation and Review as of October 1, 2024. It summarizes the actuarial data used in the valuation, analyzes the preceding year's experience, and establishes the funding requirements for fiscal 2026.

This report has been prepared in accordance with generally accepted actuarial principles and practices for the exclusive use and benefit of the Committee and Panel, based upon information provided by the staff of the City of Jacksonville Retirement Administrative Office.

Segal does not audit the data provided. The accuracy and comprehensiveness of the data is the responsibility of those supplying the data. To the extent we can, however, Segal does review the data for reasonableness and consistency. Based on our review of the data, we have no reason to doubt the substantial accuracy of the information on which we have based this report and we have no reason to believe there are facts or circumstances that would affect the validity of these results.

The measurements shown in this actuarial valuation may not be applicable for other purposes. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements; and changes in plan provisions or applicable law.

Statement by Enrolled Actuary: This actuarial valuation and cost determination was prepared and completed by me, or under my direct supervision, and I acknowledge responsibility for the results. To the best of my knowledge, the results are complete and accurate, and in my opinion, the techniques and assumptions used are reasonable and meet the requirements and intent of part VII, Chapter 112, Florida Statutes. There is no benefit or expense to be provided by the plan and/or paid from the plan's assets for which

liabilities or current costs have not been established or otherwise taken into account in the valuation. All known events or trends which may require a material increase in plan costs or required contribution rates have been taken into account in the valuation.

The actuarial calculations were directed under the supervision of Jeffrey S. Williams. I am a member of the American Academy of Actuaries and I meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion herein.

Segal makes no representation or warranty as to the future status of the Plan and does not guarantee any particular result. This document does not constitute legal, tax, accounting or investment advice or create or imply a fiduciary relationship. The Committee and Panel are encouraged to discuss any issues raised in this report with the Plan's legal, tax and other advisors before taking, or refraining from taking, any action.

We look forward to reviewing this report at your next meeting and to answering any questions.

Sincerely,

Segal

A handwritten signature in black ink that reads "Jeffrey S. Williams". The signature is written in a cursive style with a horizontal line at the end.

Section 1: Actuarial Valuation Summary

Purpose and basis

This report has been prepared by Segal to present a valuation of the City of Jacksonville General Employees Defined Contribution Plan Disability and Survivorship Benefits as of October 1, 2024. The valuation was performed to determine whether the assets and contributions are sufficient to provide the prescribed benefits and to provide information for required disclosures under Governmental Accounting Standards Board (GASB) Statements No. 67 and 68.

The contribution requirements presented in this report are based on:

- The benefit provisions of the Plan, as administered by the Committee and Panel;
- The characteristics of covered active participants, retired participants and beneficiaries as of September 30, 2024, provided by the Retirement Administrative Office;
- The assets of the Plan as of September 30, 2024, provided by the City's Finance Department;
- Economic assumptions regarding future salary increases and investment earnings;
- Other actuarial assumptions regarding employee terminations, retirement, death, etc. and
- Subject to the requirements of Part VII, Chapter 112, Florida Statutes.

Section 1: Actuarial Valuation Summary

Valuation highlights

1. The City established Disability and Survivor Benefits under the City of Jacksonville General Employees Defined Contribution Plan effective October 1, 2017. It is our understanding that the inclusion of disability and survivor benefits subjects the Plan to the State of Florida's minimum funding requirements for retirement defined benefit plan subject to the applicable laws of the State of Florida. This October 1, 2024 valuation is the fifth actuarial valuation for the updated plan.
2. The actuarial determined contribution (ADC) calculated as of October 1, 2024 is adjusted for timing and projected to the next fiscal year; the ADC for the fiscal year beginning October 1, 2025 is \$2,764,728 or 1.20% of projected payroll.
3. Unless stated otherwise, actuarial assumptions used are those from the experience study for the period October 1, 2017 – September 30, 2022 for the City of Jacksonville General Employees Retirement Plan (GERP).
4. There were no changes in actuarial assumptions or plan provisions since the prior valuation.
5. The amortization period used for the amortization of unfunded actuarial accrued liability is 23 years; this is the period for new bases established in the GERP valuation as of October 1, 2024. Amortization was calculated on a level percent of pay basis assuming an average payroll growth of 1.50%, the same assumption as used for GERP.
6. Segal strongly recommends an actuarial funding method that targets 100% funding of the actuarial accrued liability. Generally, this implies payments that are ultimately at least enough to cover normal cost, interest on the unfunded actuarial accrued liability and the principal balance.

Section 1: Actuarial Valuation Summary

Risk

7. It is important to note that this actuarial valuation is based on plan assets as of September 30, 2024. The Plan's funded status does not reflect short-term economic fluctuations but rather is based on the market values on the last day of the plan year. Segal is available to prepare projections of potential outcomes of market conditions and other demographic experience upon request.
8. Since the actuarial valuation results are dependent on a given set of assumptions, there is a risk that emerging results may differ significantly as actual experience proves to be different from the assumptions. We have not been engaged to perform a detailed analysis of the potential range of the impact of risk relative to the Plan's future financial condition, but have included a brief discussion of some risks that may affect the Plan in Section 2. A more detailed assessment would provide the Board with a better understanding of the inherent risks and could be important for the Plan because:
 - Relatively small changes in investment performance can produce large swings in the unfunded liabilities since the assets and liabilities are of similar size.
 - The Committee and Panel have not performed a detailed risk assessment since the Plan's inception.

GASB

9. The information contained in Section 5 provides the accounting information for Governmental Accounting Standards Board (GASB) Statements No. 67 and No. 68, for inclusion in the Plan's and employer's financial statements as of September 30, 2024. The accounting information utilizes different methodologies from those employed in the funding valuation, as required by the GASB.
10. The Net Pension Liability (NPL) is equal to the difference between the Total Pension Liability (TPL) and the Plan's fiduciary net position (equal to the market value of assets). The NPL as of September 30, 2024 is \$102,947.

Section 1: Actuarial Valuation Summary

Summary of key valuation results

Valuation Result	Current	Prior
Contributions for fiscal year beginning:	October 1, 2025	October 1, 2024
• Actuarially determined employer contribution	\$2,764,728	\$2,997,873
• Actuarially determined employer contribution as a percentage of projected payroll	1.20%	1.54%
Actuarial accrued liability for plan year beginning:	October 1, 2024	October 1, 2023
• Retired participants and beneficiaries	\$8,368,441	\$8,703,737
• Active participants	9,270,506	7,478,858
• Total	\$17,638,947	\$16,182,595
• Normal cost including administrative expenses for plan year beginning October 1	\$3,308,365	\$2,833,293
Assets for plan year beginning October 1:		
• Market value of assets (MVA)	\$17,536,000	\$7,481,000
• Actuarial value of assets (AVA)	\$17,536,000	\$7,481,000
• Actuarial value of assets as a percentage of market value of assets	100.00%	100.00%
Funded status for plan year beginning October 1:		
• Unfunded actuarial accrued liability on market value of assets	\$102,947	\$8,701,595
• Funded percentage on AVA basis	99.42%	46.23%
• Amortization period on an AVA basis	23	24

Section 1: Actuarial Valuation Summary

Valuation Result	Current	Prior
Key assumptions:		
• Net investment return	6.50%	6.50%
• Inflation rate	1.50%	1.50%
GASB information:		
• Discount rate	6.50%	6.50%
• Total Pension Liability	\$17,638,947	\$16,182,595
• Plan Fiduciary Net Position	\$17,536,000	\$7,481,000
• Net Pension Liability	102,947	8,701,595
• Pension Expense	\$1,886,377	\$1,879,703
• Plan Fiduciary Net Position as a percentage of Total Pension Liability	99.42%	46.23%
Demographic data for plan year beginning October 1:		
• Number of retired participants and beneficiaries	26	25
• Number of active participants	3,556	3,096
• Covered payroll	\$227,544,232	\$191,666,250
• Average payroll	63,989	61,908
• Projected payroll for next fiscal year	230,957,395	194,541,244

Section 1: Actuarial Valuation Summary

Important information about actuarial valuations

An actuarial valuation is a budgeting tool with respect to the financing of future projected obligations of a pension plan. It is an estimated forecast – the actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan.

In order to prepare a valuation, Segal relies on a number of input items. These include:

Input Item	Description
Plan provisions	Plan provisions define the rules that will be used to determine benefit payments, and those rules, or the interpretation of them, may change over time. Even where they appear precise, outside factors may change how they operate. It is important to keep Segal informed with respect to plan provisions and administrative procedures, and to review the plan summary included in our report to confirm that Segal has correctly interpreted the plan of benefits.
Participant information	An actuarial valuation for a plan is based on data provided to the actuary by the City. Segal does not audit such data for completeness or accuracy, other than reviewing it for obvious inconsistencies compared to prior data and other information that appears unreasonable. It is important for Segal to receive the best possible data and to be informed about any known incomplete or inaccurate data.
Financial information	Part of the cost of a plan will be paid from existing assets — the balance will need to come from future contributions and investment income. The valuation is based on the asset values as of the valuation date, typically reported by the City. A snapshot as of a single date may not be an appropriate value for determining a single year's contribution requirement, especially in volatile markets. Plan sponsors often use an "actuarial value of assets" that differs from market value to gradually reflect year-to-year changes in the market value of assets in determining the contribution requirements.
Actuarial assumptions	In preparing an actuarial valuation, Segal starts by developing a forecast of the benefits to be paid to existing plan participants for the rest of their lives and the lives of their beneficiaries. This requires actuarial assumptions as to the probability of death, disability, withdrawal, and retirement of participants in each year, as well as forecasts of the plan's benefits for each of those events. In addition, the benefits forecasted for each of those events in each future year reflect actuarial assumptions as to salary increases and cost-of-living adjustments. The forecasted benefits are then discounted to a present value, typically based on an estimate of the rate of return that will be achieved on the plan's assets. All of these factors are uncertain and unknowable. Thus, there will be a range of reasonable assumptions, and the results may vary materially based on which assumptions are selected within that range. That is, there is no right answer (except with hindsight). It is important for any user of an actuarial valuation to understand and accept this constraint. The actuarial model may use approximations and estimates that will have an immaterial impact on our results. In addition, the actuarial assumptions may change over time, and while this can have a significant impact on the reported results, it does not mean that the previous assumptions or results were unreasonable or wrong.

Section 1: Actuarial Valuation Summary

The user of Segal's actuarial valuation (or other actuarial calculations) should keep the following in mind:

- The actuarial valuation is prepared at the request of the Committee and Panel. Segal is not responsible for the use or misuse of its report, particularly by any other party.
- An actuarial valuation is a measurement at a specific date — it is not a prediction of a plan's future financial condition. Accordingly, Segal did not perform an analysis of the potential range of financial measurements, except where otherwise noted.
- If the Committee or Panel is aware of any event or trend that was not considered in this valuation that may materially change the results of the valuation, Segal should be advised, so that we can evaluate it.
- Segal does not provide investment, legal, accounting, or tax advice and is not acting as a fiduciary to the Plan. The valuation is based on Segal's understanding of applicable guidance in these areas and of the Plan's provisions, but they may be subject to alternative interpretations. The City should look to their other advisors for expertise in these areas.
- While Segal maintains extensive quality assurance procedures, an actuarial valuation involves complex computer models and numerous inputs. In the event that an inaccuracy is discovered after presentation of Segal's valuation, Segal may revise that valuation or make an appropriate adjustment in the next valuation.
- Segal's report shall be deemed to be final and accepted by the City upon delivery and review. Trustees should notify Segal immediately of any questions or concerns about the final content.

Section 2: Actuarial Valuation Results

Actuarial experience

Assumptions should consider experience and should be based on reasonable expectations for the future.

Each year actual experience is compared to that projected by the assumptions. Differences are reflected in the actuarial valuation.

Assumptions are not changed if experience is believed to be a short-term development that will not continue over the long term. On the other hand, if experience is expected to continue, assumptions are changed.

Actuarial Experience for Year Ended September 30, 2024

Source	Amount
1. Net gain from investments	\$831,720
2. Net gain from contributions	5,862,149
3. Net gain from other experience	1,834,906
4. Net experience gain: 1 + 2 + 3	\$8,528,775

Sources of experience variation

Experience variation is the difference between the expected and the actual experience that appear when the new valuation is compared with the projections from the previous valuation. These include:

- Mortality experience (more or fewer than expected deaths)
- The extent of turnover among participants
- The number of disability retirements (more or fewer than projected)
- Salary increases (greater or smaller than projected)

Section 2: Actuarial Valuation Results

Unfunded actuarial accrued liability

Development of Unfunded Actuarial Accrued Liability for Year Ended September 30, 2024

Component	Amount
1. Unfunded actuarial accrued liability at beginning of year	\$8,701,595
2. Employer normal cost at beginning of year	2,258,294
3. Actuarially determined contribution at beginning of year	-2,854,986
4. Interest on 1, 2 & 3	<u>526,819</u>
5. Expected unfunded actuarial accrued liability	\$8,631,722
6. Changes due to:	
a. Net experience gain	-8,528,775
7. Unfunded actuarial accrued liability at end of year	\$102,947

Section 2: Actuarial Valuation Results

Actuarially determined contribution

The actuarially determined contribution is equal to the employer normal cost payment and a payment on the unfunded actuarial accrued liability. As of October 1, 2024, the actuarially determined contribution payable for the fiscal year beginning October 1, 2025 is \$2,764,728 or 1.20% of projected payroll.

The contribution requirement as of October 1, 2024 are based on the data described in Exhibit A, the actuarial assumptions and Plan provisions described in *Section 4*, including all changes affecting future costs adopted at the time of the actuarial valuation, actuarial gains and losses, and changes in the actuarial assumptions.

Actuarially Determined Contribution

Contribution	Fiscal Year 2026 Amount	Percent of Projected Payroll	Fiscal Year 2025 Amount	Percent of Projected Payroll
1. Total normal cost	\$3,268,365	1.42%	\$2,793,293	1.44%
2. Administrative expenses	40,000	0.02%	40,000	0.02%
3. Expected employee contributions	-682,633	-0.30%	-574,999	-0.30%
4. Employer normal cost: (1) + (2) + (3)	\$2,625,732	1.14%	\$2,258,294	1.16%
5. Actuarial accrued liability	\$17,638,947		\$16,182,595	
6. Actuarial value of assets	17,536,000		7,481,000	
7. Unfunded actuarial accrued liability: (5) - (6)	\$102,947		\$8,701,595	
8. Payment on projected unfunded actuarial accrued liability	\$7,222	0.00%	\$596,692	0.31%
9. Adjustment for timing ¹	131,774	0.06%	142,887	0.07%
10. Actuarially determined contribution: (4) + (8) + (9)	\$2,764,728	1.20%	\$2,997,873	1.54%
11. Projected payroll	\$230,957,395		\$194,541,244	

¹ Adjusted for timing and projected to next fiscal year; actuarially determined contributions are assumed to be paid at the end of every month.

Section 2: Actuarial Valuation Results

Reconciliation of actuarially determined contribution

Reconciliation from October 1, 2024 to October 1, 2025

Component	Amount
Actuarially determined contribution as of October 1, 2024	\$2,997,873
Changes in Actuarially Determined Contribution due to:	
• Expected change in amortization payment due to payroll growth	9,398
• Investment (gain)/loss	-61,278
• Other gains and losses on accrued liability	-135,190
• Other changes, including composition and number of participants	-46,075
• Total change	-\$233,145
Actuarially determined contribution as of October 1, 2025	\$2,764,728

Section 2: Actuarial Valuation Results

Low-Default-Risk Obligation Measure (LDRM)

Actuarial Standard of Practice No. 4 (ASOP 4) *Measuring Pension Obligations and Determining Pension Plan Costs or Contributions*. requires the disclosure of a Low-Default-Risk Obligation Measure (LDRM) when performing a funding valuation. The LDRM presented in this report is calculated using the same methodology and assumptions used to determine the Actuarial Accrued Liability (AAL) used for funding, except for the discount rate. The LDRM is required to be calculated using “a discount rate...derived from low-default-risk fixed income securities whose cash flows are reasonably consistent with the pattern of benefits expected to be paid in the future.”

The LDRM is a calculation assuming a plan’s assets are invested in an all-bond portfolio, generally lowering expected long-term investment returns. The discount rate selected and used for this purpose is the Bond Buyer General Obligation 20-year Municipal Bond Index Rate, published at the end of each week. The last published rate in December of the measurement period, by The Bond Buyer (www.bondbuyer.com), is 3.81% for use effective September 30, 2024. This is the rate used to determine the discount rate for valuing reported public pension plan liabilities in accordance with Governmental Accounting Standards when plan assets are projected to be insufficient to make projected benefit payments, and the 20-year period reasonably approximates the duration of plan liabilities. The LDRM is not used to determine a plan’s funded status or Actuarially Determined Contribution. The plan’s expected return on assets, currently 6.50%, is used for these calculations.

As of September 30, 2024, the LDRM for the system is \$25,292,122. The difference between the plan’s AAL of \$17,638,947 and the LDRM can be thought of as the increase in the AAL if the entire portfolio were invested in low-default-risk securities. Alternatively, this difference could also be viewed as representing the expected savings from investing in the plan’s diversified portfolio compared to investing only in low-default-risk securities.

ASOP 4 requires commentary to help the intended user understand the significance of the LDRM with respect to the funded status of the plan, plan contributions, and the security of participant benefits. In general, if plan assets were invested exclusively in low-default-risk securities, the funded status would be lower and the Actuarially Determined Contribution would be higher. While investing in a portfolio with low-default-risk securities may be more likely to reduce investment volatility and the volatility of employer contributions, it also may be more likely to result in higher employer contributions or lower benefits.

Section 2: Actuarial Valuation Results

Risk

The actuarial valuation results are dependent on a single set of assumptions; however, there is a risk that emerging results may differ significantly as actual experience proves to be different from the current assumptions.

We have not been engaged to perform a detailed analysis of the potential range of the impact of risk relative to the Plan's future financial condition but have included a brief discussion of some risks that may affect the Plan.

- Economic and Other Related Risks. Potential implications for the Plan due to the following economic effects (that were not reflected as of the valuation date) include:
 - Volatile financial markets and investment returns lower than assumed
 - High inflationary environment impacting salary increases

- Investment Risk (the risk that returns will be different than expected)

The Plan's assets are comingled with the assets of the other three City of Jacksonville Retirement System plans and allocated among each plan.

- Longevity Risk (the risk that mortality experience will be different than expected)

The actuarial valuation includes an expectation of future improvement in life expectancy. Emerging plan experience that does not match these expectations will result in either an increase or decrease in the actuarially determined contribution. It is not yet known what long-term impact the COVID-19 pandemic may have on the Plan's mortality experience.

- Contribution Risk (the risk that actual contributions will be different from actuarially determined contribution)

Plan contributions are set by statute. The Plan's funding policy requires payment of 0.30% of payroll. As shown in this report, this is not enough to cover the City's contribution requirement. As such, the City should begin to contribute the actuarial determined contribution.

- Demographic Risk (the risk that participant experience will be different than assumed)

Examples of this risk include:

- More or less active participant turnover than assumed.
- More or less disability retirements than assumed.
- More or less deaths than assumed.

Section 2: Actuarial Valuation Results

- Transfer Risk

Because the ordinances defining the City's plans allow for members of the General Employees Retirement Plan (GERP) to elect a lump sum pay out of their retirement benefit to be paid as part of a transfer to the General Employees Defined Contribution Plan, there is a potential incentive to make this transfer before applying for disability benefits

Section 2: Actuarial Valuation Results

GFOA funded liability by type

The Actuarial Accrued Liability represents the present value of benefits earned, calculated using the Plan's actuarial cost method. The Actuarial Value of Assets reflects the financial resources available to liquidate the liability. The portion of the liability covered by assets reflects the extent to which accumulated plan assets are sufficient to pay future benefits, and is shown for liabilities associated with employee contributions, pensioner liabilities, and other liabilities. The Government Finance Officers Association (GFOA) recommends that the funding policy aim to achieve a funded ratio of 100 percent.

GFOA Funded Liability by Type as of September 30

Type	2024	2023
Actuarial accrued liability (AAL)		
Retirees and beneficiaries	\$8,368,441	\$8,703,737
Active and inactive members (employer-financed)	9,270,506	7,478,858
Total	\$17,638,947	\$16,182,595
Actuarial value of assets	17,536,000	7,481,000
Cumulative portion of AAL covered		
Retirees and beneficiaries	100.00%	85.95%
Active and inactive members (employer-financed)	98.89%	0.00%

Section 3: Supplemental Information

Exhibit A: Table of plan demographics

Category	Year Ended September 30, 2024	Year Ended September 30, 2023	Change From Prior Year
Active participants in valuation:			
• Number	3,556	3,096	14.9%
• Average age	42.8	42.9	-0.1
• Average years of service	3.4	3.2	0.2
• Covered payroll	\$227,544,232	\$191,666,250	18.7%
• Average payroll	\$63,989	\$61,908	3.4%
Disabled participants:			
• Number in pay status	18	16	12.5%
• Average age	62.6	60.8	1.8
• Average monthly benefit	\$2,344	\$2,324	0.9%
Beneficiaries:			
• Number in pay status	8	9	-11.1%
• Average age	61.6	59.0	2.6
• Average monthly benefit	\$1,681	\$2,012	-16.5%

Section 3: Supplemental Information

Exhibit B: Summary statement of income and expenses on a market value basis

Income and Expenses for Years Ended September 30

Item	2024	2023
Contribution and other income:		
• Employer contributions	\$8,648,000	\$4,614,000
• Employee contributions	667,000	530,000
– Net contribution and other income	\$9,315,000	\$5,144,000
Investment income:		
• Investment income	\$1,630,000	\$562,000
• Less investment fees	-37,000	-7,000
– Net investment income	\$1,593,000	\$555,000
• Total income available for benefits	\$10,908,000	\$5,699,000
Less benefit payments:		
• Net benefit payments and administrative expenses	-\$853,000	-\$744,000
Change in market value of assets	\$10,055,000	\$4,955,000
Net assets at market value at the beginning of the year	\$7,481,000	\$2,526,000
Net assets at market value at the end of the year	\$17,536,000	\$7,481,000

Section 3: Supplemental Information

Exhibit C: Table of amortization bases

Type	Date Established	Initial Period	Initial Amount	Annual Payment ¹	Years Remaining	Outstanding Balance
Initial liability	10/01/2020	27	\$10,789,981	\$728,288	23	\$10,379,663
Experience loss	10/01/2021	26	6,889,357	474,153	23	6,757,694
Change in assumptions	10/01/2021	26	-9,066,164	-623,970	23	-8,892,900

Section 4: Actuarial Valuation Basis

Exhibit 1: Actuarial assumptions, methods and models

Rationale for assumptions

The information and analysis used in selecting each demographic assumption that has a significant effect on this actuarial valuation is shown in the General Employees Retirement Plan Experience Study Report for the five-year period ended September 30, 2012.

Net investment return

6.50%

The net investment return assumption was chosen by the Retirement System's Board of Trustees with input from the actuary. The assumption is a long-term estimate derived from historical data, current and recent market expectations, and professional judgment.

Salary increases (including inflation)

COJ/JHA/NFTPO		JEA	
Service	Rate (%)	Service	Rate (%)
0	10.00	0	10.00
1-3	7.00	1	9.00
4-10	5.50	2-4	8.00
11-24	4.25	5-9	5.75
25+	3.50	10-18	5.00
		19-25	4.50
		26+	3.50

Inflation Rate

2.50%

Section 4: Actuarial Valuation Basis

Payroll growth

1.50% used for amortization of unfunded liability amounts, based on the requirement in the Florida Statutes that the assumption for this purpose may not exceed the average annual growth for the preceding ten years. Negotiated pay level increases and pay of DC Plan participants were taken into consideration in setting a payroll growth that is expected to be achieved and maintained on a ten-year average basis. The Fund's long-term payroll growth assumption is equal to the inflation assumption of 2.50%.

Mortality rates

Healthy pre-retirement:

FRS pre-retirement mortality tables for personnel other than special risk and K-12 instructional personnel, set forward 2 years, projected generationally from 2010 with Scale MP2018

Spouse post-retirement:

FRS healthy post-retirement mortality tables for personnel other than special risk and K-12 instructional personnel, set forward 2 years, projected generationally from 2010 with Scale MP2018

Disabled:

FRS disabled mortality tables for personnel other than special risk, with no set forward, projected generationally from 2010 with Scale MP2018

The FRS tables for personnel other than special risk and K-12 instructional personnel, set forward 2 years, reasonably reflect the healthy annuitant mortality experience of the General Employees Retirement Plan as of the measurement date. The FRS disabled mortality tables for personnel other than special risk reasonably reflect the disabled annuitant mortality experience as of the measurement date.

64-65	25	40	100
66	20		
67-69	15		
70 & Over	100		

¹ 100% retirement is assumed at the earlier of age 70 or 40 years of service.

Note: For the purposes of applying retirement rates, participants are treated as being eligible for retirement based on the eligibility provisions from the General Employees' Retirement Plan. Rates first apply at the earliest of age 65 with five years of Credited Service, age 50 with 20 years of Credited Service, and any age with 30 years of Credited Service

Refund of Contributions

No refunds of contributions are assumed to be payable from this fund.

Unknown Data for Participants

Same as those exhibited by participants with similar known characteristics.

Section 4: Actuarial Valuation Basis

Administrative Expenses

\$40,000 for plan year beginning October 1, 2024.

Family Composition

75% of males and 55% of females are assumed to be married. None are assumed to have dependent children. Females are assumed to be three years younger than their spouses.

Actuarial Value of Assets

Market value of assets

Actuarial cost method

Entry Age Normal Actuarial Cost Method. Entry Age is the age at the time the participant commenced employment. Normal Cost and Actuarial Accrued Liability are calculated on an individual basis based on each member's benefit accrual rate and are allocated by compensation.

Normal Cost is not included for participants who are assumed to retire with 100% certainty in the upcoming plan year based on the retirement assumptions.

Models

Segal valuation results are based on proprietary actuarial modeling software. The actuarial valuation models generate a comprehensive set of liability and cost calculations that are presented to meet regulatory, legislative and client requirements. Our Actuarial Technology and Systems unit, comprised of both actuaries and programmers, is responsible for the initial development and maintenance of these models. The models have a modular structure that allows for a high degree of accuracy, flexibility and user control. The client team programs the assumptions and the plan provisions, validates the models, and reviews test lives and results, under the supervision of the responsible actuary.

Section 4: Actuarial Valuation Basis

Change in Actuarial Assumptions

There were no changes in actuarial assumptions reflected in this valuation

Section 4: Actuarial Valuation Basis

Exhibit 2: Summary of plan provisions

This exhibit summarizes the major provisions of the Plan included in the valuation. It is not intended to be, nor should it be interpreted as, a complete statement of all plan provisions.

Plan year

October 1 through September 30

Plan status

Ongoing

Off the Job Disability

- *Age Requirement* None
- *Service Requirement* Five years of Credited Service
- *Amount* 25% of final compensation, plus 2.5% of final compensation per year of service in excess of five years, not to exceed 50% of final compensation in total

On the Job Disability

- *Age Requirement* None
- *Service Requirement* None
- *Amount* 25% of final compensation, plus 2.5% of final compensation per year of service in excess of five years, not to exceed 50% of final compensation in total

Spouse Retirement Death Benefit

- *Age Requirement* None
- *Service Requirement* Two years of Credited Service
- *Amount* 45% of the participant's earnable compensation at date of death

Section 4: Actuarial Valuation Basis

Cost of living adjustments (COLAs)

On the April 1st nearest the fifth anniversary of the initial benefit commencement date, and on each April 1st thereafter, the regular benefit is increased by 3%; only applicable to spouse's pre-retirement death benefit.

Member Contribution

0.3% of Earnable Compensation

Section 5: GASB Information

General information about the pension plan

Plan description

Plan membership. At September 30, 2024, pension plan membership consisted of the following:

Membership	Amount
Retired participants or beneficiaries currently receiving benefits	26
Inactive participants with a vested right to a deferred or immediate benefit	0
Active members	3,556
Total	3,582

Section 5: GASB Information

Exhibit 1: Net Pension Liability

Components of the Net Pension Liability	Current	Prior
Reporting date for employer under GASB 68	September 30, 2025	September 30, 2024
Measurement date	September 30, 2024	September 30, 2023
Total Pension Liability	\$17,638,947	\$16,182,595
Plan Fiduciary Net Position	17,536,000	7,481,000
Net Pension Liability	102,947	8,701,595
Plan Fiduciary Net Position as a percentage of the Total Pension Liability ¹	99.42%	46.23%

Actuarial assumptions. The TPL as of September 30, 2024, which was determined based on the results of an actuarial valuation as of October 1, 2024, used the following actuarial assumptions, applied to all periods included in the measurement:

Assumption Type	Assumption
Salary increases	3.50% - 10.00%, of which 2.50% is the Plan's long term payroll inflation
Net investment rate of return	6.50%
Other assumptions	See Section 4 of this report for a complete description of all actuarial assumptions. These assumptions were developed in the analysis of actuarial experience study for the General Employees Retirement Plan for the period October 1, 2017 through September 30, 2022.

Detailed information regarding all actuarial assumptions can be found in Section 4, Exhibit 1.

¹ These funded percentages are not necessarily appropriate for assessing the sufficiency of Plan assets to cover the estimated cost of settling the Plan's benefit obligation or the need for or the amount of future contributions.

Section 5: GASB Information

Determination of discount rate and investment rates of return

The long-term expected rate of return on pension plan investments was determined using a building-block method in which expected future real rates of return (expected returns, net of inflation) are developed for each major asset class. These returns are combined to produce the long-term expected rate of return by weighting the expected future real rates of return by the target asset allocation percentage and adding expected inflation. The target allocation (approved by the Board) and projected arithmetic real rates of return for each major asset class, after deducting inflation, but before investment expenses, used in the derivation of the long-term expected investment rate of return assumption are summarized in the following table:

Asset Class	Target Allocation	Long-Term Expected Real Rate of Return ¹
Domestic equity	30.00%	6.10%
International equity	23.00%	6.20%
Fixed income	20.00%	1.90%
Real estate	15.00%	3.50%
Private equity	6.00%	9.65%
Private credit	6.00%	6.10%
Total	100.00%	

Discount rate. The discount rate used to measure the TPL was 6.50% as of September 30, 2024 and September 30, 2023. The projection of cash flows used to determine the discount rate assumed plan member contributions will be made at the current contribution rate and that employer contributions will be made at rates equal to the actuarially determined contribution rates. Based on those assumptions, the Plan Fiduciary Net Position (FNP) was projected to be available to make all projected future benefit payments for current plan members. Therefore, the long-term expected rate of return on pension plan investments was applied to all periods of projected benefit payments to determine the TPL as of both September 30, 2024 and September 30, 2023.

¹ Based on capital market assumptions provided by Segal Marco Advisors

Section 5: GASB Information

Discount rate sensitivity

Sensitivity of the Net Pension Liability to changes in the discount rate. The following presents the Net Pension Liability of the Plan as of September 30, 2024 calculated using the discount rate of 6.50%, as well as what the Plan's NPL would be if it were calculated using a discount rate that is 1-percentage-point lower (5.50%) or 1-percentage-point higher (7.50%) than the current rate.

Item	1% Decrease (5.50%)	Current Discount Rate (6.50%)	1% Increase (7.50%)
Net Pension Liability	\$2,476,088	\$102,947	-\$1,856,881

Plan Net Pension Liability as percentage of covered payroll	0.05%	4.54%

Notes to Schedule:

- **Benefit changes:** None
- **Change of Assumptions:**

The following changes in assumptions were made for the September 30, 2023 liability measurement:

- COJ withdrawal rates were increased for participants with between four and seven years of service and 12 or more years of service.
- JEA withdrawal rates were updated to reflect more of a stair-step rate rather than a smooth reduction in rates.
- COJ and JEA retirement rates were updated across all ages and service buckets, and the 90% BACKDROP election assumption was removed (now inherent in the rate table).
- The COJ salary scale was modified to reflect higher merit and promotional increases.
- The JEA salary scale was also updated with higher rates across all service levels.

¹ Pensionable payroll as of the measurement date

¹ Covered payroll represents compensation earnable and pensionable compensation. Only compensation earnable and pensionable compensation that would possibly go into the determination of the retirement benefits are included.

Appendix A: Definition of Pension Terms

The following list defines certain technical terms for the convenience of the reader:

Term	Definition
Actuarial accrued liability for actives	The equivalent of the accumulated normal costs allocated to the years before the valuation date.
Actuarial accrued liability for retirees and beneficiaries	Actuarial Present Value of lifetime benefits to existing retirees and beneficiaries. This sum takes account of life expectancies appropriate to the ages of the annuitants and the interest that the sum is expected to earn before it is entirely paid out in benefits.
Actuarial cost method	A procedure allocating the Actuarial Present Value of Future Benefits to various time periods; a method used to determine the Normal Cost and the Actuarial Accrued Liability that are used to determine the actuarial determined contribution.
Actuarial gain or loss	A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates. To the extent that actual experience differs from that assumed, Actuarial Accrued Liabilities emerge which may be the same as forecasted or may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., assets earn more than projected, salary increases are less than assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results yield actuarial liabilities that are larger than projected.
Actuarially equivalent	Of equal Actuarial Present Value, determined as of a given date and based on a given set of Actuarial Assumptions.
Actuarial present value	<p>The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions. Each such amount or series of amounts is:</p> <p>Adjusted for the probable financial effect of certain intervening events (such as changes in compensation levels, marital status, etc.)</p> <p>Multiplied by the probability of the occurrence of an event (such as survival, death, disability, withdrawal, etc.) on which the payment is conditioned, and</p> <p>Discounted according to an assumed rate (or rates) of return to reflect the time value of money.</p>

Appendix A: Definition of Pension Terms

Term	Definition
Actuarial present value of future benefits	The Actuarial Present Value of benefit amounts expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age, anticipated future compensation, and future service credits. The Actuarial Present Value of Future Benefits includes the liabilities for active members, retired members, beneficiaries receiving benefits, and inactive members entitled to either a refund of member contributions or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due.
Actuarial valuation	The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan, as well as Actuarially Determined Contributions.
Actuarial value of assets	The value of the Plan's assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets but commonly plans use a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the Actuarially Determined Contribution.
Actuarially determined	Values that have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the Plan.
Actuarially determined contribution	The employer's contributions, expressed as a dollar amount or a percentage of covered plan compensation, determined under the Plan's funding policy. The ADC consists of the Employer Normal Cost and the Amortization Payment.
Amortization method	A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the Unfunded Actuarial Accrued Liability. Under the Level Percentage of Pay method, the Amortization Payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the Unfunded Actuarial Accrued Liability. Under the Level Percentage of Pay method, the stream of payments increases at the assumed rate at which total covered payroll of all active members will increase.
Amortization payment	The portion of the pension plan contribution, or ADC, that is intended to pay off the Unfunded Actuarial Accrued Liability.
Assumptions or actuarial assumptions	The estimates upon which the cost of the Plan is calculated, including: Investment return — the rate of investment yield that the Plan will earn over the long-term future; Mortality rates — the rate or probability of death at a given age for employees and retirees; Retirement rates — the rate or probability of retirement at a given age or service; Disability rates — the rate or probability of disability retirement at a given age; Withdrawal rates — the rate or probability at which employees of various ages are expected to leave employment for reasons other than death, disability, or retirement; Salary increase rates — the rates of salary increase due to inflation, real wage growth and merit and promotion increases.

Appendix A: Definition of Pension Terms

Term	Definition
Closed amortization period	A specific number of years that is counted down by one each year, and therefore declines to zero with the passage of time. For example, if the amortization period is initially set at 20 years, it is 19 years at the end of one year, 18 years at the end of two years, etc. See Open Amortization Period.
Decrements	Those causes/events due to which a member's status (active-inactive-retiree-beneficiary) changes, that is: death, retirement, disability, or withdrawal.
Defined benefit plan	A retirement plan in which benefits are defined by a formula based on the member's compensation, age and/or years of service.
Defined contribution plan	A retirement plan, such as a 401(k) plan, a 403(b) plan, or a 457 plan, in which the contributions to the plan are assigned to an account for each member, the plan's earnings are allocated to each account, and each member's benefits are a direct function of the account balance.
Employer normal cost	The portion of the Normal Cost to be paid by the employer. This is equal to the Normal Cost less expected member contributions.
Experience study	A periodic review and analysis of the actual experience of the Plan that may lead to a revision of one or more actuarial assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified based on recommendations from the Actuary.
Funded ratio	The ratio of the Actuarial Value of Assets (AVA) to the Actuarial Accrued Liability (AAL). Plans sometimes also calculate a market funded ratio, using the Market Value of Assets (MVA), rather than the AVA.
GASB 67 and GASB 68	Governmental Accounting Standards Board (GASB) Statements No. 67 and No. 68. These are the governmental accounting standards that set the accounting rules for public retirement systems and the employers that sponsor or contribute to them. Statement No. 68 sets the accounting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 67 sets the rules for the systems themselves.
Investment return	The rate of earnings of the Plan from its investments, including interest, dividends and capital gain and loss adjustments, computed as a percentage of the average value of the fund. For actuarial purposes, the investment return often reflects a smoothing of the capital gains and losses to avoid significant swings in the value of assets from one year to the next.
Net Pension Liability (NPL)	The Net Pension Liability is equal to the Total Pension Liability minus the Plan Fiduciary Net Position.
Normal cost	The portion of the Actuarial Present Value of Future Benefits and expenses, if applicable, allocated to a valuation year by the Actuarial Cost Method. Any payment with respect to an Unfunded Actuarial Accrued Liability is not part of the Normal Cost (see Amortization Payment). For pension plan benefits that are provided in part by employee contributions, Normal Cost refers to the total of member contributions and employer Normal Cost unless otherwise specifically stated.
Open amortization period	An open amortization period is one which is used to determine the Amortization Payment but which does not change over time. If the initial period is set as 30 years, the same 30-year period is used in each future year in determining the Amortization Period.

Appendix A: Definition of Pension Terms

Term	Definition
Plan Fiduciary Net Position	Market value of assets.
Service costs	The portions of the actuarial present value of projected benefit payments that are attributed to valuation years.
Total Pension Liability (TPL)	The actuarial accrued liability under the entry age normal cost method and based on the blended discount rate as described in GASB 67 and 68.
Unfunded actuarial accrued liability	The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets. This value may be negative, in which case it may be expressed as a negative Unfunded Actuarial Accrued Liability, also called the Funding Surplus or an Overfunded Actuarial Accrued Liability.
Valuation date or actuarial valuation date	The date as of which the value of assets is determined and as of which the Actuarial Present Value of Future Benefits is determined. The expected benefits to be paid in the future are discounted to this date.
