Capital Markets Review

Third Quarter Economic Environment

During Q3, risk assets benefited from a combination of expectations for more accommodative monetary policy, relatively stable economic fundamentals, and the announcement of trade agreements between the US and several major partners. Global equity markets delivered strong returns, continuing the upward trend observed since the market volatility experienced in early April around the initial US tariff announcement. The US Federal Reserve shifted toward a more accommodative stance during the quarter. The Federal Open Markets Committee (FOMC) announced a 25 basis point reduction to the Federal Funds rate following its September meeting bringing the target range to 4.00%–4.25%. This marked the first reduction since December 2024 and reflected growing concerns about labor market trends despite inflation remaining above target. Key economic data points released during the quarter sent mixed signals—underscoring the complexity of the current market environment. Labor market conditions weakened noticeably, with August payroll growth significantly below expectations and the prior 12-month estimate of job creation, ending March 2025, revised downward by more than 900,000 jobs. The unemployment rate edged up to 4.3% while consumer confidence declined to its lowest level since April. Inflation remained above target, with the core Personal Consumption Expenditures (PCE) price index at 2.9%.

- Equity Risk Premium

Third Quarter Review

Broad Market

US equity markets experienced a strong quarter, supported by investor optimism around expectations for more accommodative monetary policy and generally stable economic conditions. AI, semiconductors, and cloud computing themes continued to play a significant role in bolstering equity returns, with the Russell 3000 Index returning 8.2% in Q3.

Market Cap

Growth stocks outperformed value stocks, with the Russell 3000 Growth Index returning 10.4% and the Russell 3000 Value Index returning 5.6%. Small-cap stocks outperformed large-cap stocks for the first time since Q3 2024, with the Russell 2000 Index returning 12.4% compared to 8.0% for the Russell 1000 Index.

Style and Sector

Small-cap stock outperformance over large-cap stocks in Q3 was broad-based, with three of the four largest sectors in the small-cap space posting double digit returns. Overall, it was a difficult environment for active managers, with many positioned more cautiously among the higher multiple stocks associated with current market themes.

Style and Capitalization Market Performance (%)

Valuations

S&P 500 Index Sector Performance (%)

Third Quarter Review

Developed Markets

Developed international markets posted positive returns in Q3; however, they trailed the US after outperforming in Q1 and Q2. The MSCI EAFE Index posted a 4.8% return for the quarter as sentiment improved following new trade agreements with the US. Value stocks outperformed growth stocks and small-cap stocks outperformed large-cap stocks. Japan was the top-performing region in Q3 despite slowing GDP growth and uncertainty from the recent election. Most active international managers underperformed during the quarter across all styles and market capitalizations.

Emerging Markets

Emerging markets continued their strong year, with the MSCI Emerging Markets Index returning 10.6% in Q3. Continuing a recent trend, growth stocks in emerging markets outpaced value stocks. By market cap, large-cap stocks outperformed small-cap stocks during the quarter. Markets were led higher by the continued rally in Chinese technology stocks due to ongoing AI enthusiasm. Conversely, India was a top detractor, as the market reacted to tariffs imposed by the US and India's significant exposure to the new H-1B visa fee. The majority of active core and growth managers underperformed their respective benchmarks in Q3, with value managers faring better during the period.

All returns are shown net of foreign taxes on dividends.

Third Quarter Review

Broad Market

In Q3, the Fed delivered its first rate cut of the year at the September meeting, lowering the policy rate by 25 basis points. While the move was widely anticipated, the Fed has framed the move as a risk management exercise, rather than signaling the start of a rapid easing cycle. Treasury yields drifted lower during the quarter, particularly at the front end, resulting in modest steepening of the yield curve. The Bloomberg US Aggregate Bond Index returned 2.0%.

Credit Market

Lower-quality issuers also participated, as investors continued to favor carry over caution amid stable default expectations, with the Bloomberg US Corporate High Yield Index gaining 2.5%. Investment-grade bond spreads continued to tighten to decade lows, with the Bloomberg US Corporate Investment Grade Index advancing 2.6% in Q3.

Emerging Market Debt

Emerging market debt also delivered strong performance, supported by spread compression and more stable US dollar strength. Hard currency bonds outpaced local currency issues, with the JPMorgan EMBI Global Diversified Index returning 4.8%, versus a 2.8% gain for the JPMorgan GBIEM Global Diversified Index.

Valuations

Valuations shown represent the 5th through 95th percentiles to minimize the effect of outliers.

Fixed Income Performance (%)

Third Quarter Review - Absolute Return

General Market - Hedge Funds

In Q3, hedge funds continued a year of generally positive performance, with the HFRI Asset Weighted Composite Index returning 4.8%, on a preliminary basis, resulting in a year-to-date return of approximately 7.5%. Macro managers enjoyed a strong quarter after more lackluster results earlier in the year. The HFRI Macro Total Index returned 5.1% in Q3, bringing its year-to-date performance to 3.8%. Expectations for lower policy rates aided equity positions as the HFRI Long/Short Directional Index returned 7.7% in Q3, bringing its year-to-date performance to 14.1%. Fixed Income spreads continued to contract during the quarter, benefiting Credit Arbitrage managers, especially those with relatively larger high yield exposures. Diversified strategies remained consistently positive during the quarter.

General Market - Global Tactical Asset Allocation (GTAA)

Global Tactical Asset Allocation (GTAA) strategies that RVK follows closely generated positive performance with a subset outperforming a US centric blend of 60% equity and 40% fixed income (60/40 blend). The best performing long-biased strategies were those with higher allocations and strong security selection in emerging markets - especially Chinese equities - as well as developed ex-US markets, specifically Japan. Gold exposure contributed to returns as well.

HFRI Hedge Fund Performance (%)

Third Quarter Review - Real Assets

General Market - Diversified Inflation Strategies (DIS)

Diversified Inflation Strategy (DIS) managers tracked closely by RVK reported positive performance for the quarter, but most underperformed a 60/40 blend. The top performing managers benefited from larger exposures to inflation linked bonds, natural resources, and allocations to precious metals, particularly gold and silver. Managers that lagged peers had higher exposure to energy, particularly natural gas and agriculture commodities impacted by tariff negotiations.

General Market - Real Estate

Core private real estate generated a positive 0.7% total return in Q3 (preliminary and gross of fee basis), as reported by the NFI-ODCE Index. Total performance was primarily driven by a 1.0% income return, partially offset by a price depreciation return of -0.3%. Income returns continue to drive recent index gains, as price returns have fluctuated slightly between positive to slightly negative over the past five quarters. Publicly traded real estate delivered a total return of 2.7%, as measured by FTSE/NAREIT All REITs Index, bringing year-to-date returns to 4.5%. At this point, real estate pricing appears to have neared a bottom for most sectors. Uncertainty surrounding trade and fiscal and monetary policy have left many businesses and renters reluctant to commit to leases.

Real Asset Performance (%)

NCREIF Property Index is shown N/A until available.

Aug-25	Primary reasons at time of addition included meaningful loss of strategy assets, investment team turnover, and sustained underperformance vs. both the benchmark and peer group.
Baillie Gifford International Growth (BGEFX)	Sep-25	Baillie Gifford Index	ACWI Ex US Growth (SA + CF) Median	Mar-11	✗	✗	✗	✗	✗	✗		Oct-25	Rolling five-year return (net of fees) has fallen below the rolling five-year benchmark return for three consecutive quarters, and; Rolling five-year return (gross of fees) has ranked in the bottom third of the peer group for three consecutive quarters.

✓ = strategy exceeds benchmark / falls in the top two thirds of the peer group over the stated trailing period.

✗ = strategy does not exceed benchmark / falls in the bottom third of the peer group over the stated trailing period.

Organization, Team, Process, and AUM Developments

Sawgrass Diversified Large Cap Growth

The firm reported net positive inflows of \$4 million in Q3 while the strategy had net positive inflows of \$2 million. There were no departures from the investment team during the period. Following a positive quarter of excess returns to start the year amid a period of heightened market volatility, the strategy significantly trailed the Russell 1000 Growth Index. The strategy continues to trail the Index for the trailing 1-, 3-, 5-, 7-, and 10-year periods primarily due to its poor performance in up market environments. Additionally, the strategy now trails the Index since its inception in 1998. Given the strategy bias toward a conservative risk profile, it has been underweight the Technology sector and the largest stocks in the Index. This positioning has been detrimental in past up markets while also being a source of relative downside protection when those stocks trail the general market.

Baillie Gifford International Growth (BGEFX)

We are placing the Baillie Gifford International Growth strategy on the Watch List given it has met the quantitative evaluation factors shown above, specifically around sustained underperformance versus both its benchmark and peer group. Underperformance following the global pandemic has largely been driven by the rally we have observed in more deep value-oriented stocks across international equity markets. Of note, we have seen a two standard deviation event every year for the last few years for value outperformance (versus growth) over this period. In particular, deep cyclicals outperformed in 2021 and 2022 stemming from a variety of sources such as supply chain issues to revenge spending. The strategy's aggressive growth orientation has struggled in the subsequent rising-rate environment, where cyclical sectors such as banks have dominated returns. Compounding the challenge, the team deviated from its valuation discipline during the COVID period, allowing significant multiple expansion in the portfolio; those multiples contracted sharply soon after. The investment team continues to remain stable, and the product remains large at \$47.4B in assets. The portfolio positioning is centered around the team's high conviction growth opportunities in a fairly concentrated portfolio, as expected. Following past periods of underperformance, the strategy has rebounded successfully during a period of sustained growth stock leadership. In future growth-led environments, it is expected that Baillie Gifford would participate meaningfully, with a likelihood that it is removed from the Watch List after an extended period of outperformance that pushes its medium-term (5 or 7-years) excess returns into positive territory, assuming no material business or team disruptions occur.

Performance shown is net of fees.

Correlation Matrix - 10 Years

	A	B	C	D
A	1.00			
B	0.48	1.00		
C	-0.13	0.17	1.00	
D	0.42	0.80	0.24	1.00

A = HFRI EH: Equity Market Neutral Index (Alpha)
B = MSCI ACW Index (Gross) (Capital Appreciation)
C = Bloomberg US Govt Bond Index (Capital Preservation)
D = Real Return Custom Index (Inflation)

Asset Allocation by Theme is based on dedicated manager allocations; as such, thematic allocations are approximations. Allocations shown may not sum up to 100% exactly due to rounding. Target Allocation and associated ranges are reflective of the January 2021 approved policy targets. The RVK Liquidity Rating is calculated using beginning of month investment weights applied to each corresponding asset class liquidity rating. Please see the Glossary for additional information regarding liquidity, thematic, and custom index descriptions.

City of Jacksonville Police and Fire Pension Fund
Total Fund Attribution - IDP vs. Total Fund Policy Index

Quarter To Date Ending September 30, 2025

Performance shown is net of fees. Calculation is based on monthly periodicity. See Glossary for additional information regarding the Total Fund Attribution - IDP calculation.

Certain valuations (marked with a **) are preliminary estimates of valuation as of the date of reporting and reflect the estimated impact of subsequent net cash contributions/distributions. These figures may be used in calculations contained in this report. Index IRR represents the dollar-weighted returns calculated using the S&P UBS Leveraged Loan Index+2% assuming an index investment with the same cash flow timing. IRRs are shown only for investments with one year or more of cash flows and for which an accurate IRR could be calculated. Applicable IRRs are marked with 'N/M' for not material. Fund IRR is the annualized since-inception net internal rate for the indicated fund or composite. Fund Multiple is the since inception sum of distributions and valuation divided by paid in capital. Quartile data is based on information provided by Preqin.

Investment Strategy

The Fund pursues a diversified core real estate strategy that seeks a total return which consists largely of current income with modest appreciation and low risk potential. The Fund invests in high-quality, well-leased and stabilized assets with dominant competitive characteristics in attractive demographic markets throughout the US and targets to outperform the NCREIF ODCE Index over a full market cycle. The Fund uses third-party leverage, not presently expected to exceed 35% of the total portfolio value or 65% on any individual property at the time of procurement of debt. These limitations also include all debt utilized in the Fund's joint venture investments.

Investment Strategy

The Principal U.S. Property Aggregate is a core real estate account with a low to moderate risk profile, aligned with other funds in the NFI-ODCE Index. It manages risk by investing in well-leased, unleveraged properties and maintaining a diversified portfolio with limited obligations. Key objectives of the fund include building a diversified real estate portfolio that reflects U.S. commercial real estate performance, and outperform or match the NFI-ODCE Equal Weight benchmark over a full market cycle. In order to achieve these objectives, the Aggregate holds an interest in residential, office, industrial, retail, self-storage and other real estate properties.

Performance Related Comments:

- Performance is annualized for periods greater than one year.
- The inception date shown indicates the first full month of performance following initial funding.
- RVK began monitoring the assets of the City of Jacksonville Police and Fire on 12/01/2019. Prior historical data was provided by the custodian and previous consultant.
- In July 2021, Harvest Fund Advisors MLP (SA) and Tortoise Capital Advisors MLP (SA) were both liquidated, with proceeds flowing to NT Collective Daily Agg Bnd Index Lending (CF).
- In October 2021, Ares Pathfinder Core, LP was funded with an initial capital call occurring at month's end.
- In December 2021, H.I.G. Realty Partners IV, LP was funded with an initial capital call occurring at month's end.
- During 03/2022, the remaining residual cash in Harvest Fund Advisors MLP (SA) and Tortoise Capital Advisors MLP (SA) was liquidated.
- In June 2022, VPC Asset Backed Opportunistic Credit Fund (Levered) LP was funded with an initial capital call occurring at month's end.
- In July 2022, Artemis Real Estate Partners Healthcare Fund II LP was funded with an initial capital call occurring on 07/15.
- In March 2023, Bell Value-Add Fund VIII LP was funded with an initial capital call occurring on 03/23.
- In April 2023, Kennedy Lewis Capital Partners Domestic III LP had its first capital call occurring on 04/03.
- In July 2023, Dodge & Cox Income (DODIX) was funded on 07/26.
- In August 2023, Thompson Siegel Core Fixed Income (SA) was fully liquidated on 08/14.
- In September 2023, Hammes Partners IV LP was funded with an initial capital call occurring on 09/08.
- From 09/26/2023 to 11/07/2023, the NT Collective Daily EAFE Index Lending (CF) consisted of 100% cash and therefore did not track its benchmark return.
- In January 2024, Blue Owl Diversified Lending 2020 LP was funded with an initial capital call occurring on 01/31.
- In May 2024, Harrison Street Real Estate Partners IX LP was funded with an initial capital call occurring on 05/30.
- In October 2024, Ares US Real Estate Opportunity IV LP was funded with an initial capital call occurring on 10/10.
- In January 2025, Blue Owl Digital Infrastructure III-A LP (formerly IPI Partners III-A LP) was funded with an initial capital call occurring on 01/06.
- In March 2025, Waycross Focused Large Cap Core Equity (SA) was funded with assets received from the NT Collective Daily S&P 500 Index Lending (CF). In addition, the Wedge Capital Management Small Cap Value (CIT) was liquidated with assets transferred to Wedge Capital SMID Cap Value (CIT).
- In May 2025, KLCP Domestic IV LP was funded with an initial capital call for expenses occurring on 05/22.
- In September 2025, JPMorgan Large Cap Growth (SA) was funded with proceed from the full and partial liquidations of the Loomis Sayles Large Cap Growth (CF) and Sawgrass Diversified Large Cap Growth (SA), respectively, via an orderly transition event managed by Loop Capital.
- Market values shown for Ares Pathfinder Core LP, Ares US Real Estate Opportunity IV LP, Artemis Real Estate Partners Healthcare II LP, Bell Value-Add VIII LP, Blue Owl Diversified Lending 2020 LP, Hammes Partners IV LP, Harrison Street Real Estate Partners IX LP, KLCP Domestic III LP, and VPC Asset Backed Opportunistic Credit (Levered) LP are final as of 06/30 and are adjusted for subsequent cash flows.
- Market value shown for H.I.G Realty Partners IV is final as of 09/30.
- Cash held in private asset custodian accounts, as of 09/30/25:
 - Ares Pathfinder Core LP: \$2,180,671.68
 - Artemis Real Estate Partners Healthcare II LP: \$403,357.65
 - Bell Value-Add VIII LP: \$246,602.39
 - Blue Owl Digital Infrastructure III-A LP: \$211,071.59
 - Hammes Partners IV LP: \$282,954.13
 - Harrison Street Real Estate Partners IX LP: \$430,528.86
 - KLCP Domestic III LP: \$163,927.76
 - VPC Asset Backed Opportunistic Credit (Levered) LP: \$1,526,665.14

- **Baillie Gifford Index:** The passive Baillie Gifford Index consists of 100% MSCI EAFE Grth Index (USD) (Net) through 11/2019 and 100% MSCI ACW Ex US Grth Index (USD) (Net) thereafter.

Glossary

Active Return - The difference between the investment manager/composite performance relative to the performance of an appropriate market benchmark.

Active Share - Measures the degree to which the holdings of a fund differ from the holdings of the benchmark. Active share is calculated by taking the sum of the absolute value of the differences of the weight of each holding in the fund versus the weight of each holding in the benchmark and dividing by two.

Alpha - A measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by beta. It is a measure of the portfolio's historical performance not explained by movements of the market or a portfolio's non-systematic return.

Alpha Ratio - A measure of a portfolio's non-systematic return per unit of downside risk. It is measured by dividing the alpha of a portfolio by the downside risk. The non-systematic return is a measure of a portfolio's historical performance not explained by movements of the market.

Average Quality - Bond quality ratings are reported using the investment managers' and the index providers' preferred rating agency. *Average Quality for managers unable to provide this statistic is instead provided by Morningstar; if unavailable on Morningstar, it has been estimated using a credit quality distribution provided by the manager.* There are two primary rating agencies in the US. *Moody's* assigns ratings on a system that employs up to four symbols (consisting of letters and numbers), such as, Aaa, Aa2, etc., with Aaa being the highest or safest rating. *Standard & Poor's (S&P)* employs a system that uses + and - along with letters, such as AAA, AA+, etc. The two rating agencies' systems are summarized below:

<u>S&P</u>	<u>Moody's</u>	<u>Explanation</u>	<u>S&P</u>	<u>Moody's</u>	<u>Explanation</u>
Higher Credit Quality – Investment Grade			Lower Credit Quality – Below Investment Grade		
AAA	Aaa	Prime/Highest credit quality	BB+	Ba1	Speculative/Low credit quality
AA+	Aa1	High credit quality	BB	Ba2	
AA	Aa2		BB-	Ba3	
AA-	Aa3		B+	B1	Highly speculative
A+	A1	Upper-medium credit quality	B	B2	
A	A2		B-	B3	
A-	A3		CCC+	Caa1	Substantial credit/default risk
BBB+	Baa1	Lower-medium credit quality	CCC	Caa2	Extremely speculative
BBB	Baa2		CCC-	Caa3	
BBB-	Baa3		CC	Ca	Vulnerable to default
			C	Ca	
			D	C	In default

Benchmark Effect - The difference between the blended return of each respective managers' benchmark within a composite and the composite's benchmark return.

Beta - A measure of the sensitivity of a portfolio to the movements in the market. It is a measure of a portfolio's non-diversifiable or systematic risk.

Box Plots - A graphical representation of the distribution of observations. From top to bottom, the four boxes represent the spread between the maximum value and the minimum value in each quartile. A quartile represents the values that divide the observations into four quarters (i.e., 1st quartile, 2nd quartile, 3rd quartile, and 4th quartile). The median observation is where the 2nd quartile and 3rd quartile meet.

Buy and Hold Attribution - At the beginning of the time period under analysis, the manager and benchmark portfolios are broken down into segments (i.e., styles, sectors, countries, and regions) based on the desired type of attribution. The formula assumes zero turn-over to the manager and benchmark portfolios throughout the period and calculates the segment returns ("buy and hold returns") to arrive at performance attribution. Due to portfolio turnover, buy and hold attribution may not accurately represent quarterly performance relative to the benchmark. Country, region, sector, and style allocations are as of the date one quarter prior to the reporting date, and the returns shown are for those segments throughout the quarter reported. Due to disclosure guidelines set by each investment manager, equity characteristics shown are as of the most recent date available. The following is the methodology for segment classification:

Sector - Attribution is calculated using the Global Industry Classification Standard (GICS), which is a detailed and comprehensive structure for sector and industry analysis. Stocks are classified by their primary sector as defined by S&P Capital IQ data. Attribution to "Other" is the result of securities based in industries that do not fit into any GICS classification.

Country/Region - Attribution is calculated using the Morgan Stanley Capital International (MSCI) region standards. Stocks are classified by their domicile country/region, as defined by S&P Capital IQ data, and thus may differ from the classification of the investment manager and/or index provider. Attribution to "EMEA" represents securities based in Europe, the Middle East, and Africa. Attribution to "Other" is the result of securities based in countries/regions that do not fit into any MSCI classification.

Style - Stocks are classified into the following style boxes: large/mid/small vs. growth/neutral/value. Stocks are classified along large/mid/small categories at the time of the Russell index rebalancing, using the index market cap boundaries as cutoff points. Stocks are classified along growth/neutral/value categories at the time of the Russell index rebalancing, using the price/book ratio as supplied by S&P Capital IQ. Stocks in the Russell 3000 Index portfolio are sorted by price/book ratio; names with the highest price/book ratio that make up 1/3 of the total market capitalization are assigned to the growth category, and names that make up the subsequent 1/3 of the total market capitalization are assigned to the neutral category, while the balance of the names are assigned to the value category. Stocks are unclassified when there is not enough data to determine a size and style metric.

Portfolio Characteristics and Buy and Hold Attribution reports utilize product-specific data for all mutual funds and commingled funds.

Glossary

Capital Markets Review -

Breakeven Inflation - Measures the expected inflation rate at each stated maturity by taking the difference between the real yield of the inflation-linked maturity curve and the yield of the closest nominal Treasury maturity.

Consumer Confidence - Measures domestic consumer confidence as defined by the degree of optimism on the state of the economy that consumers express through saving and spending.

Consumer Price Index (CPI) - Measures the change in the price level of consumer goods and services.

Federal Funds Rate - The interest rate at which a depository institution lends funds maintained at the Federal Reserve to another depository institution overnight. It is one of the most influential interest rates in the US economy, since it affects monetary and financial conditions, which in turn have a bearing on key aspects of the broad economy including employment, growth and inflation.

Option-Adjusted Spread - Measures the flat spread of an index or bond to the Treasury yield curve after removing the effect of any embedded options.

Purchasing Managers Index (PMI) - Measures economic activity by surveying purchasing managers on a monthly basis as to whether business conditions have improved, worsened, or stayed the same.

Real Gross Domestic Product (Real GDP) - An inflation-adjusted measure that reflects the value of all goods and services produced by an economy in a given year.

Unemployment Rate - The percentage of the total labor force that is unemployed but actively seeking employment.

US Dollar Total Weighted Index - Measures the value of the US Dollar relative to a basket of other world currencies. It is calculated as the weighted geometric mean of the dollar's value versus the EUR, GBP, CAD, SEK, CHF, and JPY.

VIX - Measures the implied volatility of S&P 500 Index options by looking at the market's expectation of the S&P 500 Index volatility over the next 30 day period. Commonly referred to as the "fear index" or the "fear gauge."

Cash Flow Effect – The composite's active return minus the sum of each managers' active return minus the benchmark effect.

Consistency - The percentage of quarters that a product achieved a rate of return higher than that of its benchmark. The higher the consistency figure, the more value a manager has contributed to the product's performance.

Convexity - A measure of the shape of the curve that describes the relationship between bond prices and bond yields.

Correlation - A statistical measure of the relationship between asset class returns. A value of 1.00 is a perfect correlation; that is, the asset classes always move in the same direction. A value of -1.00 indicates a perfect negative correlation, in which the asset classes always move in opposite directions of each other. A value of 0 indicates there is no relationship between the direction of returns of the two asset classes. Correlation calculations only consider the direction of changes relative to two variables and not the magnitude of those changes.

Coupon Rate - The percentage rate of interest paid on a bond or fixed income security; it is typically paid twice per year.

Current Yield - The annual income of a security divided by the security's current price.

Down Market Capture - Down market by definition is negative benchmark return and down market capture represents the ratio in % terms of the average portfolios return over the benchmark during the down market period. The lower the value of the down market capture the better the product's performance.

Downside Risk - A measure similar to standard deviation that focuses only on the negative movements of the return series. It is calculated by taking the standard deviation of the negative returns for the selected periodicity. The higher the factor, the riskier the product.

Earnings Per Share - It is backward looking, calculated using the one year current EPS divided by the one year EPS five years ago.

Effective Duration - The approximate percentage change in a bond's price for a 100 basis point change in yield.

Excess Return vs. Market - Average of the monthly arithmetic difference between the manager's return and the benchmark return over a specified time period, shown on an annualized basis.

Excess Return vs. Risk Free - Average of the monthly arithmetic difference between the manager's return and the risk-free return (i.e., ICE BofA 3 Mo US T-Bill Index unless specified otherwise) over a specified time period, shown on an annualized basis.

Excess Risk - A measure of the standard deviation of a portfolio's performance relative to the risk-free return.

Expense Ratios - Morningstar is the source for mutual fund expense ratios.

Gain/Loss - The net increase or decrease in the market value of a portfolio excluding its Net Cash Flow for a given period.

Indices - All indices and related information are considered intellectual property and are licensed by each index provider. The indices may not be copied, used, or distributed without the index provider's prior written approval. Index providers make no warranties and bear no liability with respect to the indices, any related data, their quality, accuracy, suitability, and/or completeness.

Information Ratio - Measured by dividing the active rate of return by the tracking error. The higher the information ratio, the more value-added contribution by the manager.

Glossary

Liability Driven Investing (LDI) - A method to optimally structure asset investments relative to liabilities. The change in liabilities is estimated by the Ryan Labs Generic PPA Index of appropriate duration for that Plan. This benchmark is based on generic data and is therefore an approximation. RVK is not an actuarial firm, and does not have actuarial expertise.

Estimated Funded Status - The estimated ratio of a Plan's assets relative to its future liabilities. This is calculated by dividing the Plan's asset market value by the estimated present value of its liabilities. The higher the estimated funded status, the better the Plan's ability to cover its projected benefit obligations. An estimated funded status of 100% indicates a Plan that is fully funded.

Estimated PV of Liabilities - An estimate of a Plan's future liabilities in present value terms. The beginning of the period liability is provided by the Plan's actuary. The period-end present value liability estimate provided in this report is derived by applying the estimated percentage change generated using the Ryan Labs Generic PPA Index with duration similar to that reported on the most recent actuarial valuation report.

Duration of Liabilities - The sensitivity of the value of a Plan's liabilities to changes in interest rates, as calculated by the Plan's actuary.

Duration of Assets - The dollar-weighted average duration of all the individual Plan assets.

Estimated Plan Hedge Ratio - The estimate of how well a Plan's investment portfolio is hedged against changes in interest rates - a primary driver of funded status movements. This is calculated by dividing the dollar-weighted values of both the Plan asset duration by the liability duration and multiplying by the estimated funded status. An estimated plan hedge ratio of zero indicates that the Plan's liabilities have not been hedged, whereas a value of one indicates fully hedged.

Modified Duration - The approximate percentage change in a bond's price for a 100 basis point change in yield, assuming the bonds' expected cash flows do not change.

Mutual Fund Performance - Whenever possible, manager performance is extended for any share class that does not have 10 years of history. Using Morningstar's methodology, a single ticker within the same fund family (often the oldest share class) is chosen to append historical performance.

Net Cash Flow - The sum, in dollars, of a portfolio's contributions and withdrawals. This includes all management fees and expenses only when performance shown is gross of fees.

Peer Groups -

Plan Sponsor Peer Groups - RVK utilizes the Mellon Analytical Solutions Trust Universe along with the Investment Metrics Plan Sponsor Universe. The combined Mellon Analytical Solutions Trust Universe and Investment Metrics Plan Sponsor Universe is used for comparison of total fund composite results and utilizes actual client performance compiled from consultant and custodian data. The Plan Sponsor Peer Group database includes performance and other quantitative data for over 2,100 plans which include corporate, endowment, foundation, public, and Taft Hartley plans.

Investment Manager Peer Groups - RVK utilizes Investment Metrics' Peer Groups for investment manager peer comparison and ranking. The Investment Metrics Peer Group database includes performance and other quantitative data for over 840 investment management firms and 29,000 investments products, across more than 160 standard peer groups. Mutual Fund Peer Groups are net of fees.

Percentile Rankings - Percentile rank compares an individual fund's performance with those of other funds within a defined peer group of managers possessing a similar investment style. Percentile rank identifies the percentage of a fund's peer group that has a higher return (or other comparative measurement) than the fund being ranked. Conversely, 100 minus the individual fund's ranking will identify the percentage of funds within the peer group that have a lower return than the fund being ranked.

1 - Highest Statistical Value

100 - Lowest Statistical Value

Example: American Funds AMCP;R-4 (RAFEX) is ranked in the 4th percentile within the IM US Equity Large-Cap Growth Funds (MF) Peer Group for the Sharpe Ratio. Within the IM US Equity Large-Cap Growth Funds peer group, 4% of the other funds performed better than American Funds AMCP;R-4 (RAFEX), while 96% of the funds performed worse.

Performance Methodology - RVK calculates performance for investment managers and composites using different methodologies.

Investment Managers - Performance is calculated for interim periods between all large external cash flows for a given month and geometrically linked to calculate period returns. An external cash flow is defined as cash, securities, or assets that enter or exit a portfolio. RVK defines a "large cash flow" as a net aggregate cash flow of $\geq 10\%$ of the beginning-period portfolio market value or any cash flow that causes RVK calculated performance to deviate from manager/custodian reported performance in excess of 5 basis points for a given month.

Composites - The Modified Dietz methodology is utilized to calculate asset class, sub-asset class, and total fund composite performance. The Modified Dietz method calculates a time-weighted total rate of return that considers the timing of external cash flows; however, it does not utilize interim period performance to mitigate the impact of significant cash in- and outflows to the composite.

RVK calculates performance beginning with the first full month following inception. Since inception performance may vary from manager reported performance due to RVK using the first full month of returns as the inception date. Performance for both managers and composites is annualized for periods greater than one year.

Portfolio Characteristics & Distribution (%) - Due to disclosure guidelines set by each investment manager, portfolio characteristics and distribution percentages shown are as of the most recent date available.

Price to Earnings Ratio - The ratio valuing a company's current share price relative to its trailing 12-month per-share earnings (EPS).

Private Equity Quartile Ranks - Private Equity quartile ranks are generated using vintage year peer group data provided by Thomson Reuters, and are based on each fund's annualized, since inception internal rate of return (IRR). Three Private Equity peer groups are available via Thomson Reuters: Buyout, Venture, and All Private Equity. Ranks are available quarterly, at a one-quarter lag.

R-Squared - The percentage of a portfolio's performance explained by the behavior of the appropriate benchmark. High R-Squared means a higher correlation of the portfolio's performance to the appropriate benchmark.

Return - Compounded rate of return for the period.

% Return - The time-weighted rate of return of a portfolio for a given period.

Risk Free Benchmark - ICE BofA 3 Mo US T-Bill Index unless specified otherwise.

Glossary

RVK Liquidity Rating - A qualitative method for determining the relative amount of liquidity in a portfolio. The characteristics considered when determining relative liquidity include trading volume, gates for redemption, leverage, nature of transactions, and pricing mechanisms. The RVK Liquidity Rating is calculated using beginning of month investment weights applied to each corresponding asset class liquidity rating.

<u>Asset Class</u>	<u>RVK Liquidity Rating</u>	<u>Asset Class</u>	<u>RVK Liquidity Rating</u>
<u>Liquid Investments</u>		<u>Less Liquid Investments</u>	
T-Bills and Treasuries	100	Fixed Income Plus Sector	50
Cash Equivalents	98	Stable Value (Plan Sponsor Directed)	50
TIPS	95	Hedge Funds of Funds	35
US Large Cap Equity	95		
Diversified Real Return	93		
Stable Value (Participant Directed)	91		
Global Equity	90	<u>Not Liquid Investments</u>	
Non-US Large Cap Equity	90	Core Real Estate	25
Global Tactical Asset Allocation	88	Core Plus Real Estate	15
MLPs	85	Non-Core Real Estate	5
US Mid Cap Equity	85	Private Equity	5
US SMid Cap Equity	85	Private Credit	5
US Small Cap Equity	85		
REITs	85		
Non-US Small Cap Equity	85		
Emerging Markets Equity	85		
Core Fixed Income	85		
Core Plus Fixed Income	80		

Sector Allocation - Negative fixed income sector allocation reflects manager's use of derivatives, short selling, or interest rate swaps. An allocation to "Other" is the result of securities that do not fit into RVK's standardized classification, such as Catastrophe, CLOs, Common Stock, Convertibles, CRTs, Derivatives, Direct Loans, Emerging Markets Local Corporates, ETFs, FX Forwards, Infrastructure Debt, Reverse Repo, Swaps, Trade Finance, Unsecured Bonds, and Other Assets.

Sharpe Ratio - Represents the excess rate of return over the risk-free return (i.e., ICE BofA 3 Mo US T-Bill Index unless specified otherwise), divided by the standard deviation of the excess return to the risk free asset. The result is the absolute rate of return per unit of risk. The higher the value, the better the product's historical risk-adjusted performance.

Simple Alpha - The difference between the manager's return and the benchmark's return.

Spread Duration - The approximate percentage change in a bond's price for a 100 basis point change in its spread over a Treasury of the same maturity.

Standard Deviation - A statistical measure of the range of a portfolio's performance. The variability of a return around its average return over a specified time period.

Thematic Classification - Represents dedicated manager allocations; as such, thematic allocations are approximations. RVK categorizes the following asset classes as Alpha, Capital Appreciation, Capital Preservation, and Inflation:

<u>Alpha</u>	<u>Capital Appreciation</u>	<u>Capital Preservation</u>	<u>Inflation</u>
Absolute Return Strategies	Public Equity	Core Fixed Income	TIPS
Currency Overlay	Private Equity	CMBS Fixed Income	Bank Loans
	Preferred Securities	Asset Backed Fixed Income	Core Real Estate
	High Yield	Domestic Core Plus Fixed Income	Real Return
	Convertible Fixed Income	Mortgage Backed Fixed Income	Inflation Hedges
	TALF Funds	International Developed Fixed Income	REITs
	Distressed Debt	Cash Equivalents	Commodities
	Emerging Market Fixed Income	Stable Value	
	Value Added Real Estate		
	Opportunistic Real Estate		

Time Period Abbreviations - QTD - Quarter-to-Date. CYTD - Calendar Year-to-Date. FYTD - Fiscal Year-to-Date. YOY - Year Over Year.

Total Fund Attribution - The Investment Decision Process (IDP) model provides an approach to evaluating investment performance that applies to all asset classes and investment styles. The IDP model is based on a top-down hierarchy framework of investment decisions, with each decision contributing to the overall profit or loss. The IDP approach starts from the strategic asset allocation and follows the flow of the investments down to the manager's skill.

Strategic Asset Allocation (SAA) - The percentage return gained or lost from the long-term strategic asset allocation decision, the most significant determinant of long-term performance. SAA is the product of the target asset allocation multiplied by the corresponding benchmark returns.

Tactical Asset Allocation (TAA) - The percentage return gained or lost from not having been precisely allocated at the target asset allocation mix, whether by deviations that are tactical in nature or a by-product of moving towards the target mix. TAA is the product of the actual asset allocation multiplied by the broad asset class benchmarks, less the SAA.

Style Selection (SS) - The percentage return gained or lost from intentional style biases within each asset class (e.g. value rather than core or overweight to emerging markets relative to benchmark). SS is the product of the actual manager allocation within each asset class multiplied by their specific benchmark, less TAA.

Manager's Skill (MS) - The percentage return gained or lost from manager value added relative to their specific benchmark. MS is the product of the actual manager allocation multiplied by their achieved excess return.

Glossary

Total Fund Beta - Total Fund Beta is calculated using the S&P 500 as the benchmark. It represents a measure of the sensitivity of the total fund to movements in the S&P 500 and is a measure of the Total Fund's non-diversifiable or systematic risk.

Tracking Error - A measure of the standard deviation of a portfolio's performance relative to the performance of an appropriate market benchmark.

Treynor Ratio - Similar to Sharpe ratio, but focuses on beta rather than excess risk (standard deviation). Treynor ratio represents the excess rate of return over the risk-free rate (i.e., ICE BofA 3 Mo US T-Bill Index unless specified otherwise) divided by the beta. The result is the absolute rate of return per unit of risk. The higher the value, the better historical risk-adjusted performance.

Unit Value - The dollar value of a portfolio, assuming an initial nominal investment of \$100, growing at the compounded rate of %Return for a given period.

Up Market Capture - Up market by definition is positive benchmark return and up market capture represents the ratio in % terms of the average portfolio's return over the benchmark during the up market period. The higher the value of the up market capture the better the product's performance.

Yield to Maturity - The rate of return achieved on a bond or other fixed income security assuming the security is bought and held to maturity and that the coupon interest paid over the life of the bond will be reinvested at the same rate of return. The 30-Day SEC Yield is similar to the Yield to Maturity and is reported for mutual funds.

Yield to Worst - The bond yield calculated by using the worst possible yield taking into consideration all call, put, and optional sink dates.
