

Floodways :

Often designated in areas where flow is constricted or where velocity impacts the course of the water flow (outside of a curve)

Palm Coast adopted setback due to dynamic nature of floodways- the location of the floodway within the stream may change over time due to erosion and deposit of sediment; the setback prevents obstruction of flow and provide some cushion for change in course over time thus assuring design standard still met over time, and some cushion for inaccuracies in current locations and applied design criteria; also design concern over dynamic natural channels entering bulk-headed sections

This setback was not part of their 2016 rating improvement and has not yet been scored by FEMA in Palm Coast. Reached out Roy McClure at FEMA in Atlanta but have not heard back.
